

Facts Rather than Assumptions

- Stay Ahead of Your Users

No fancy reports and expensive consultant analyses! Your users complain about the long response times - but what is bogus and what is facts?

The management quickly becomes impatient for results, and you try to use the many tools to scan your system and locate errors and causes. But the solution is not obvious.

Innologic has the Solution

BI Performance Monitor is an elegantly designed dashboard providing you with exact knowledge by gathering relevant data from SAP BI and SAP BW. You get the opportunity to become more efficient, achieve time savings and stay ahead of the users.

We provide an overview based on facts allowing you to act proactively before the problems become noticeable. In case of problems, you will be guided to a solution. Furthermore you will get easy insight into the impact of actions that improve your performance. Users automatically receive information about their personal report status and expectations regarding the performance of the system.

The BI Performance Monitor from Innologic is a powerful and indispensable tool for simple diagnostics and focus on the direct causes of performance issues in your SAP BI solution. You and your users will easily obtain an overview of whether it is employees, specific reports run-time, timing, trends, etc. causing these issues.

The complete range is at your disposal, giving you a very easy access to processing, checking, improving and prevention.

BI Performance Monitor is customer-specific and fully scalable and adjustable. Innologic is developing the solution continuously with improvements and new features.

The Benefits For You

- Application for SAP BI/BW, that in a structured and consistent way provides insight into the use and performance of the BI solution
- Dashboard information about BI performance crosswise the organization and in all layers on front- and back-end level

- User-friendly solution that guides you directly to the pain-points in the SAP BI solution
- The solution supports the diagnostics of the fundamental causes of BI errors
- Focus on changes in the BI solution that creates business value promptly
- Standardised BI tool, which is implemented as Rapid Deployment Solution at a fixed framework and fixed price

Innologic provides innovative Business Intelligence solutions for the largest private and public companies in the Danish and Nordic market.

We create results in co-operation with our customers combining business skills within management models, data warehouse strategy and project management - with technical competencies within data modeling, programming and testing.

We transform data into information - and provide an overview.

Performance is no longer the Topic of Discussion

BI Monitor consists of 2 modules

BI Performance Monitor

- Module for the CIO, the BIO Manager, BICC and the like.
- Complete analysis and control of front-end/back-end.
- Monitoring, visual analysis / cockpits / dashboard report usage statistics, user behavior, trend analysis, BWA usage and statistics.

BI Status Monitor

- The module for the users.
- Updating of personal report status, benchmark of other users, data quality and helping guide for error causes.

Both modules are also available in SAP Design Studio for mobile needs.

Customer Solutions

BI Performance Monitor is part of Rapid Deployment Solutions Suite. Our consultants are working dedicated on creating value for our customers through innovative solutions that do not compromise on quality.

How?

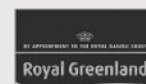

We provide a complete application for your SAP BI - ready to be implemented within 1 week.

"BI Performance Monitor is IT's tool facing for the business and has resulted in an enhanced and more fact-based dialogue with the business. This is a strength for both parties involved and a strong foundation for the completion of continuous improvements."
Jesper Gerner,
 SAP BI Lead, Banedanmark

"BI Monitor is an efficient application. We now have an in-depth and detailed overview that has saved me, my team and our users a lot of time!"
Lars Bo Hassinggaard,
 CIO, Royal Greenland

"Everyone has performance issues - it's just not top-of-mind. Performance problems need to be recognised! We have got an intuitive solution where we can easily pinpoint performance problems and quickly see the health status of our SAP BW"
Tony Christensen,
 CFO, Lemvig-Müller
